## Work related information

---

### Performance details

- June 25, 2022, France, Paris, Centre Pompidou, Grande salle, festival Manifeste

Publisher : editionCG

### Detailed staff

- accordion

### Realisation

- Serge Lemouton

### Useful links on Brahms

- [\*4 studies for selfportraits in surroundings\*](#) for accordion and electronics (2022), 26mn
- [\*\*Clemens Gadenstätter\*\*](#)

## Version related information

---

Performance date: Feb. 5, 2023

Documentation date: Feb. 20, 2023

Version state: valid, validation date : Feb. 20, 2023, update : Feb. 20, 2023, 3:18 p.m.

### Documentalist

Serge Lemouton (Serge.Lemouton@ircam.fr)

You noticed a mistake in this documentation or you were really happy to use it? Send us feedback!

### Realisation

- Sylvain Cadars (Sound engineer)
- Serge Lemouton (Computer Music Designer)

Version length: 28 mn

Default work length: between 26 mn and 27 mn about

### Comment

as played in Eclats festival (Stuttgart)

### Other version(s)

- [Clemens Gadenstätter - 4 studies for selfportraits in surroundings - Premiere \(July 21, 2022\)](#)

## Electronic equipment list

### Computer Music Equipment

- 1 MacBook Pro - *Apple Laptops* (Apple)
- 1 Digiface USB - *Sound Board* (RME)
- 1 BCF 2000 - *MIDI Mixer* (Behringer)
- 1 Footswitch / Sustain Pedal - *Footswitch / Sustain Pedal*

### Audio Equipment

- 4 Microphone - *Microphone*
- 10 Loudspeaker - *Loudspeakers*
- 1 Stage monitor - *Stage Monitors*

## Instructions

---

# Introduction

---

The electroacoustic part of this piece tries to establish a relationship between instrumental and non-instrumental sounds. It is neither a piece for instrument and tape nor a piece for realtime augmented instrument : what is realised here is a bidirectional double cross-fertilization between the sound of the accordion and environmental sounds. The goal is to make these “found objects” coming out from the musician performance while the sound of the instrument is transformed and spatialized by these elements that are both foreign and intimate.

## Cues

---

The “events” in the patch correspond with the 51 cues in the score:

- part I : 8 cues
- part II : 9 cues
- part III : 23 cues
- part IV : 11 cues

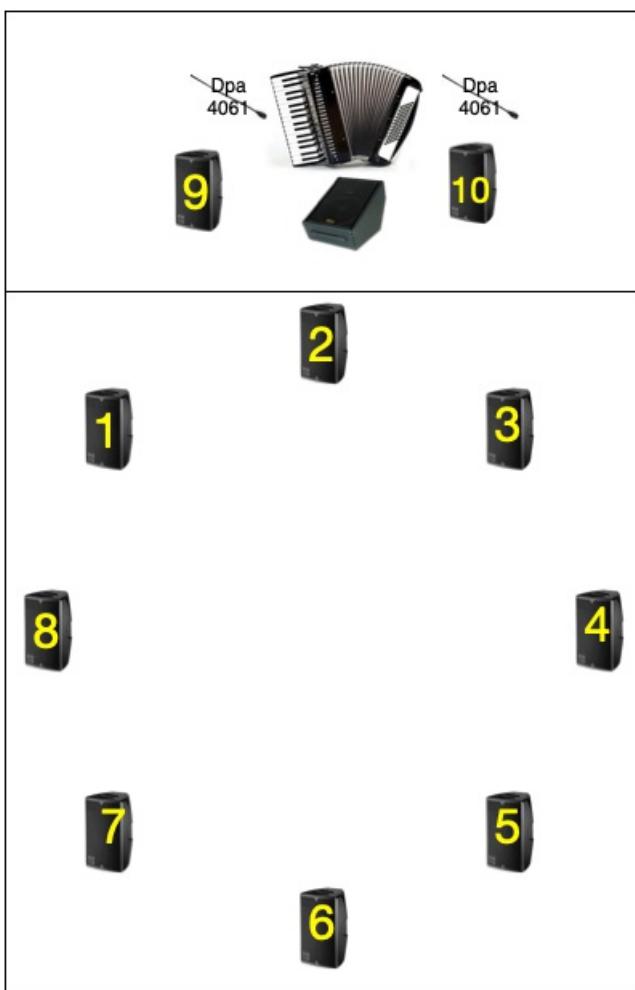

The “events” in the patch should be triggered off-stage by a computer musician in charge of operating the patch, using the right-arrow key (set up by default) or an external button on the MIDI controller (set up in the *MIDI/OSC* subpatcher).

The “events” in the patch could also be triggered by the accordionist on the stage using a footswitch pedal

The 8 faders on the controller (which control the level of the cross synthesis layers, sound files, delays and spatialisation) can be manipulated throughout the performance.

## Loudspeaker setup

---

This map illustrates the setup used in Centre George Pompidou Grande Salle for the premiere of the work. For ulterior performances, the loudspeaker setup can be adapted to the concert venue. In this case the loudspeakers' positions and number should be adjusted in the *akk.panoramix.preset* file (cf *SPAT* subpatcher).

## Micropohones setup

The microphone disposition (close miking) should ensure a good separation of right and left hand.

## Midi setup

### midi mixer

1	Cross synthesis 1	tape filtered by the accordeon spectrum
2	Cross synthesis 2	accordeon filtered by the tape spectrum
3	1ngate	tape filtered by the accordeon dynamic
4	2ngate	accordeon filtered by the tape dynamic
5	delays	for part IV only

6	surround master level	
7	stereo master level	
8	tape direct out	untransformed sound files

## footswitch

If the musician is triggering the electronic cues on stage, set up a footswitch pedal connected to a midi interface connected to the computer

## Software installation

- copy the *Akk\_max* folder on your hard disk
- if necessary install the provided packages in Max

## Software initialization (simple version)

- open *Akk.maxproj* with Max 8
- double click on *Akk\_low\_latency\_light.maxpat* to open the patch
- Reset
- DSP Status Options :
  - Fs 48kHz
  - IO vs 512
  - Signal vs 512
  - Overdrive ON
  - Audio Interrupt OFF
- Start Dsp
- switch off low\_latency\_mode
- Select *Akk1.asco score*
- check the midi faders
- launch the *init* event with the right arrow key
- ready to play

## Software installation (low latency version)

In order to ensure the fastest responses from the electronic part for the percussive effects, the lowest latency possible is required. For this purpose you need to start in parallel to instances of max using this version.

In concert it is highly recommended to use this version.

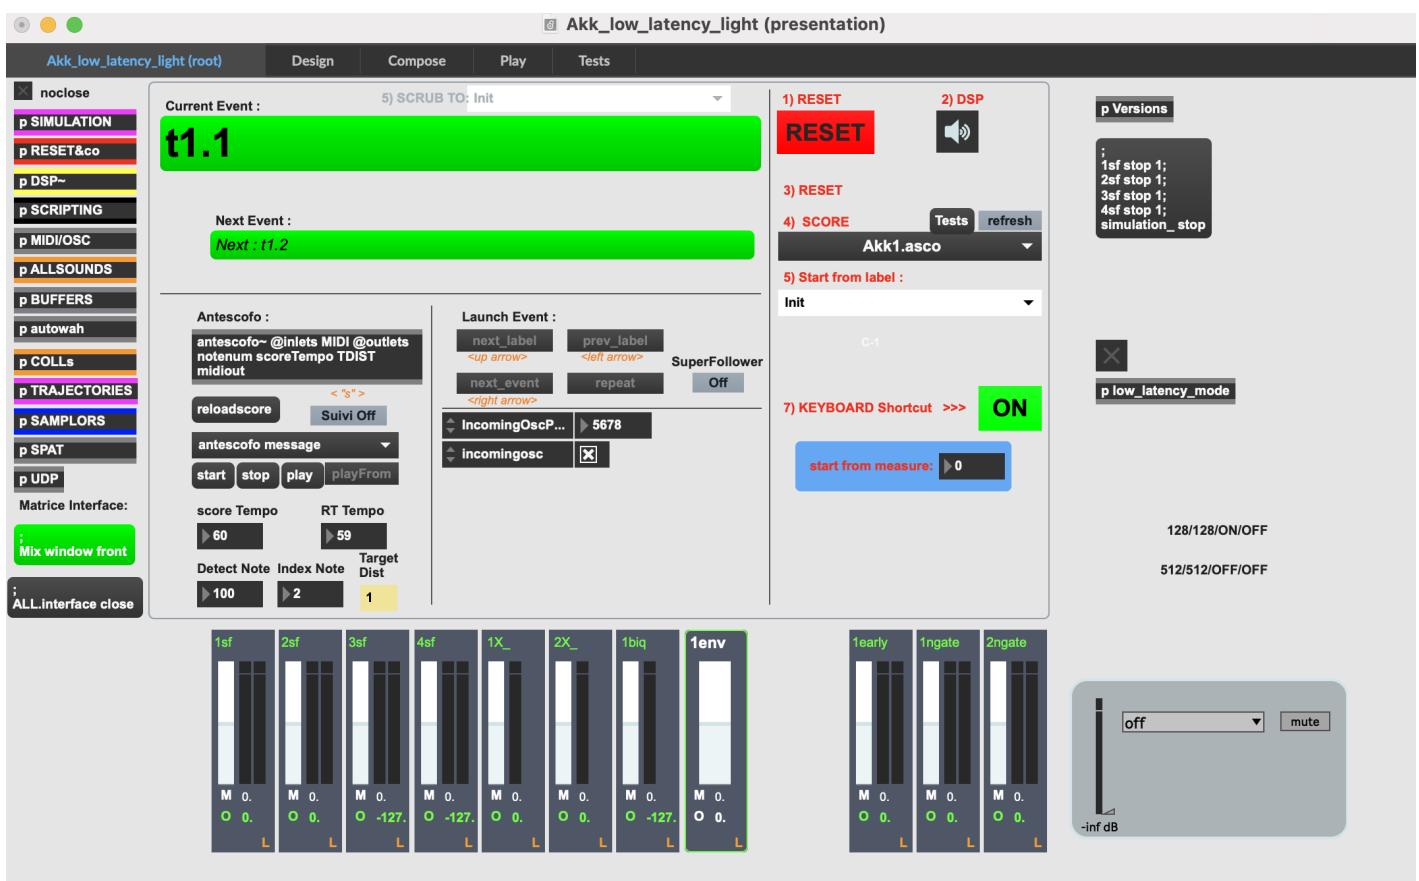

- Copy the Max Application
- create loopbacks on your audio board on channels 25 to 30 to allow audio communications between the 2 patches

## Software initialisation (low latency version)

- open *Akk.maxproj* in both instance of max
- in the first instance : double click on *Akk\_low\_latency\_light* to open the main patch
  - Main patch : DSP Status :
    - Fs 48kHz
    - IO vs 64
    - Signal vs 64
    - Overdrive ON
    - Audio Interrupt OFF
- in the second instance : double click on *akk.sourcefilters.standalone.maxpat* to open the auxiliary patch
  - Auxiliary patch DSP Status Options :

- Fs 48kHz
- IO vs 512
- Signal vs 512
- Overdrive OFF
- Audio Interrupt OFF
- switch DSP on
- go back to main patch :
  - Reset
  - Start Dsp
  - switch ON low\_latency\_mode
  - Select *Akk1.asco* score
  - check the midi faders
  - launch the *init* event with the right arrow key
  - ready to play

## Patch presentation

## System calibration, testing in simulation mode

There is a recording of the solo part allowing you to test the patch without the musician.

- In the antescofo score (event "INIT") simply replace the line `simulation_ on 0` to `simulation_ on 1`
- save the score
- reload with the main patch *Score* menu

## Program note

Tout ce que je vis et ai vécu me constitue. Je suis fait de ces expériences, ce sont elles qui me façonnent. Je me forme à partir des motifs appris, pour devenir ce que je ressens comme étant moi. Ce qui sonne et ce qui est entendu est simultanément appris, préformé et peut constituer une expérience unique. Lors de la composition, tout ce qui a ainsi été façonné s'exprime en tant que tel : un conteneur de contenus prédéfinis, chargé d'une compréhension et d'expériences vécues aussi prédéfinies. En même temps, chaque son est modelé par une certaine énergie et forme une certaine expérience de perception. Ces deux niveaux sont difficilement séparables – pourtant, ils sont substantiels par leur interaction : l'expérience la plus intime porte le sceau de la société, l'élément le plus banal peut devenir l'expérience la plus intime.

C'est cette imbrication qu'articulent les *4 studies for selfportraits in surroundings*. Des souvenirs de longue date, des expériences – banales

et quotidiennes, mais qui continuent de me toucher – : voilà les matrices à partir desquelles le matériau et la structure sont développés.

C'est la rencontre entre l'expérience intime et un environnement façonné. Une structure sonore, développée à partir de l'expérience personnelle, rencontre la strate sonore documentant un environnement qui tout à la fois permet et prédéfinit l'expérience vécue.

Ce fondement paradoxal est réactualisé et réarticulé par la composition : d'une part, à travers une formation du son caractérisée par la projection et le traitement, d'autre part, par une polyphonie entre les sources sonores, les médiums concevant le son : l'instrument et celui/celle qui en joue, de même que l'électronique, qui livre des structures sonores composées et un traitement en temps réel.

L'interaction entre les différents niveaux est mise en œuvre en empruntant deux voies : d'une part celle des mécanismes polyphoniques de traitement relevant de la composition et faisant interagir les strates entre elles et, d'autre part, celle du traitement par l'électronique en temps réel projetant les deux niveaux (discours instrumental d'une part et électronique composée d'échantillons sonores

« documentaires » de l'autre) respectivement l'un sur l'autre. Chaque strate s'inscrit dans l'autre, chacune devenant perméable aux qualités de l'autre et s'actualisant grâce à celles-ci. Le travail de transformation se comprend comme un processus d'individuation des conditions présidant au projet : l'environnement documenté, tout ce qui est le fruit d'un apprentissage – expérience (intérieure), expérience vécue, expression des « sensations » –, l'instrument avec son idiome et ses prérequis à l'empreinte médiale. À ce deuxième niveau d'individuation, toutes les énergies et qualités emmagasinées peuvent réapparaître et s'agencer sous un jour nouveau et ainsi s'actualiser. L'individuation signifie également que l'écoute de la musique et la musique ne se confondent plus complètement : un espace est donné à la compréhension auditive pour qu'elle puisse faire sa propre expérience, par-delà les assignations et les imprégnations, et peut-être découvrir d'autres strates d'elle-même.

Clemens Gadenstätter, note de programme du concert ManiFeste du 25 juin 2022 dans la Grande Salle du Centre Pompidou, traduction de Philippe Abry.
